## Product Description

**Advantages of Xanitalia Film Wax:** Lower melting temperature 104°F - 115°. Ideal for hair removal on delicate areas (armpits, bikini, face). Longer cooling time, which provides longer thermal exposure, relaxes hair follicles and makes waxing less painful. Completely adjustable to the skin surface, catching all the hairs without applications repeating. Because of its extra elasticity Film Wax won't break during hair removal. When removed, Film Wax does not leave any broken hairs. Significantly reduces the time required for depilation procedure. **Directions for use**

1. Pour Pebble Wax into a wax warmer. Turn warmer on and heat wax for approximately 20 minutes. Do not melt wax completely; wax should be a thick consistency in the center and soft around the sides.
2. Before hair removal, check if the wax temperature is comfortable by dipping an applicator into wax and applying a small amount to the inside of the wrist. If wax runs off applicator, it's too hot – wax should cling to the applicator.
3. To begin waxing, cleanse skin. Next, apply an even layer of hard wax in the opposite direction of hair growth, and then back down to encapsulate the hair. For a better grip to remove wax, leave a thicker edge of wax

when applying it. 4. Allow wax to cool on skin until wax hardens. Then raise the thicker edge at the end of the strip and remove quickly, pulling against the direction of hair growth. 5. After hair removal, apply a post wax lotion.
